

# ID TECHNOLOGY LABEL PRINTER APPLICATOR FOR FLAT PRODUCTS

1290

“ LABELING , CODING AND MARKING SPECIALISTS . ”

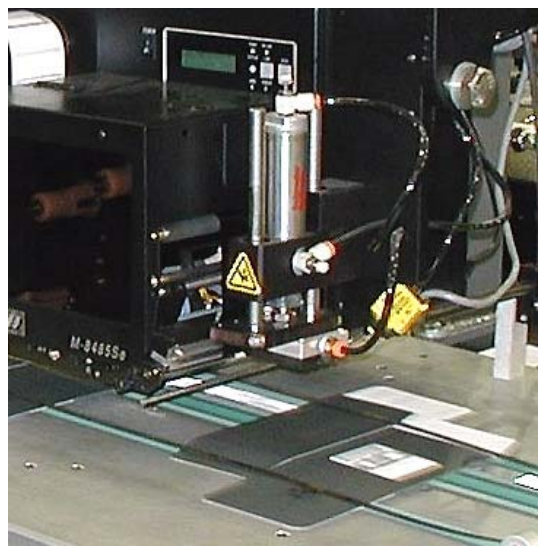

- UPC Barcode Labeling
- Price Labeling
- Document Barcoding
- Cover-up Labeling

ID Technology offers a solution for barcode printing on envelopes, blister cards, knock down cartons or any flat product. An industrial printer applicator is combined with an automatic friction or shuttle feeder, vacuumized transport and optional shingling conveyor or product collection bin to achieve 100+ piece per minute production with minimal operator intervention. With an accumulating conveyor, batch counting and grouping can be accomplished in a variety of configurations.

The Model 250 Printer Applicator uses thermal transfer technology to print and apply variable information labels on-line. The printer produces crisp barcodes, text and graphics at speeds up to 12" per second on a variety of label substrates.

The Model 250 is mounted on a traversing yardarm allowing for precise placement of labels across the flow of the conveyor. The height of the applicator is adjusted with a hand crank on the vertical mount. An optional "Smart-Tamp" can be integrated for variable size products or a Tamp-Jet module can be used for non-contact label application. Other options include a variety of scanners, verifiers and counters.

This system can also accommodate inkjet printers, multiple applicators and a variety of other labeling, coding and marking devices.
